Step Three

Choose a Finished Size

Flexible magnetic sheeting can be cut into a number of different sizes.

Custom Cutting Capabilities - Our precision equipment will cut any roll of flexible sheeting material to the size that your application requires. This is achieved using a combination of state-of-the-art computerized slitting and cut-off equipment. Please consult your sales specialist for quotes and to have cut-piece yield estimates calculated.

1. **Full Roll** - Use full rolls of 24.375" wide by 10, 25 or 50 ft. for short print runs of various size final lengths.
2. **Cut Sheet** - Have your magnet pre-cut to fit your standard print press sheet size, or cut to a specific sign blank size or whatever size your final application requires. Our high speed cutting equipment cuts full rolls to sizes as small as 2" x 2" with a tolerance of +/- .060" on either dimension. Tolerances will vary depending on length of cut.
3. **Slit Rolls** - Keep the versatility of a full 25, 50 or 100 foot roll but have it slit to a smaller width. Slitting wheels slit a full roll into several rolls of various widths as narrow as 2", with a precision of +/- .060".
4. **Die Cut** - Custom and standard shapes available (see page 22).
