### Four-Color Printing for Better Comprehension

#### Four-Color or Black-and-White Printing, with Ease and Speed

Simply press the COPY button on the board's control panel to print out what is written on the board. You can choose between easy-to-see four-color copies or economical and fast black-and-white copies on the spot, depending on the subject matter or the needs of the meeting.

Color gives your copies more impact!

#### Supports Plain Paper for As-Is Printing and Storage

The M Series Copyboards accommodate plain paper that can be written on directly, distributed, and stored as-is for added convenience. As many as 20 copies of the same page can be printed at one time.

\*Compatible with many leading brands of inkjet printers.

## Data Storage and Printout in Meetings — The Flexibility You Require

PLUS is proud to introduce the M Series, the world's first electronic copyboards with a memory card function, supporting CompactFlash cards as a standard feature. Now, using only a control panel button, you can download information from the board to a memory card without bringing a PC into a meeting and connecting it to the board. The data stored in the card can be transferred as-is, or downloaded to a PC. With a dual function for outputting both hard and soft copy, the M Series Copyboards make sharing information easier than ever.

In addition to CompactFlash cards, the copyboards also accommodate MemoryStick and SD cards using an optional CF card adapter.

- Record Data...**  
You can store data on the memory card without hooking up a PC.
- View Data...**  
You can view the data on a PC for immediate viewing.
- Utilize Data...**  
E-Mailing, editing, and processing are easy. Data can be handed over through a card.

- Plain Paper...**  
You can make hand-written notes on a printed copy. Information is easily saved and distributed to participants.
- Four-Color Printing...**  
Write and print in four colors. Easy to see, easy to understand.
- Switch to Black-and-White Printing...**  
With just the touch of a button.

### Utilize Data through a Memory Card

#### Download Data Easily to a Memory Card - No Need for a PC

Simply press the MEMORY button on the board's control panel to download whatever is written on the board page to a memory card (CompactFlash card). Press the button each time you finish a board page, and everything is stored as image data in a memory card. Enjoy a stress-free meeting—it is no longer necessary to connect and start a PC using cables. A board page throughout converts to about 200 KB of image data. Using an SD-MB CompactFlash card, you can record and store approximately 100 board pages per card.

#### Download to a PC Easily

Simply insert the card into a PC card slot, USB card reader, PC card adapter, or similar device to download the data to a PC. Once the data is downloaded, it can be processed in a number of ways.

#### Instant PC Viewing, Easy Emailing

The image data is stored in PNG format, an international standard. Since this is compatible with the leading web browsers\*, it is possible to view the images without any special applications. Furthermore, by sending the data as an attached file to email, it can be shared easily with all meeting participants.

\*Internet Explorer 4.0 or later versions, Netscape Navigator 4.04 or later versions

#### Editing and Processing, Too

Using Microsoft Office applications (Word, Excel, PowerPoint), data can be further edited. Information can be processed using other image editing programs, as well. And because the PNG format can be used as-is with HTML, the data can be easily displayed on intranet
