**IPD SERIES**

The Webster Interactive Plasma Display (IPD) System is a flat screen plasma monitor that works as an interactive computer screen. PolyVision's exclusive digital laser interface turns the electronic pen into a fully functional computer mouse, giving the operator complete control of the display from the front of the room. IPD has the ability to display digital applications while simultaneously accommodating handwritten notes and sketches. Coupled with precision cursor tracking, remote participants follow every action as though they were in the room. Teams benefit from immediate feedback

and ideas instantly evolve across time zones, stimulating creativity and enhancing productivity.

Webster IPD helps speakers deliver powerful presentations. With the ability to stand in front of the room unencumbered by projectors, presenters command attention. Unlike competitive products which require screen overlays that cloud visibility, wrap-around laser technology protects the exceptional clarity that plasma monitors provide.
