

Drawing #6

Option 1: "Screw Down Option"

FlipUp™ frame only

For model FF-ST finger open style OR
model FF-RP round profile security edge
(double security protection)

Screw down option so all 4 edges of frame are tightened down onto insert to prevent theft or wind blow out. Also great for use on moving vehicles since you can use less expensive, thinner inserts, and the insert won't "rattle" inside the frame. Use security screws, or can use regular screws, your choice. Any thickness inserts up to .270" thick.
