

Magnetically Receptive FlexIRON™

FlexIRON™

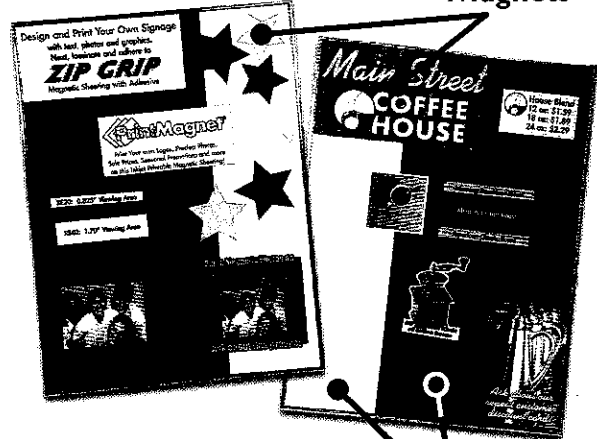

Step One

Choose a FlexIRON™ Laminate

The unique, versatile, flexible, ferrous material that attracts magnets. It looks like flexible magnetic sheeting, yet it is not a magnet. It is a magnetically receptive material that attracts all types of low profile magnets, including flexible and ceramic magnets. Either surface (front or back) attracts magnets. And it is easy to drill or cut with scissors, knife, die, or punch. Just imagine the possibilities!

- Standard width - 24.375"
- Standard roll lengths - 10, 25 and 50 ft.
- Standard thickness - .025"
(does not include thickness of laminate)

Magnets

Step Two

Choose a Finished Size

FlexIRON™

FlexIRON™ can be processed to a finished size using the same equipment that is used for magnetic sheeting.

1. Full roll
2. Cut sheet
3. Slit rolls
4. Custom cut

For more details on custom cutting capabilities, see page 7.
